

National Institutes of Health (NIH) Awards Data Collection Software Project to 270net

FREDERICK, MD (September 19, 2008) – [270net Technologies, Inc.](#), a Veteran-Owned Small Business (VOSB) providing IT services to public and private sector clients, has been providing quality services and support to NIH Division of Occupational Health and Safety for over five years, leading to the award of a new project by the Safety Operations Support Branch.

The project involves upgrading an existing data collection and reporting system for laboratory safety surveys, including the creation of new survey data collection software to be used by field safety inspectors equipped with tablet PCs. The new software will be developed using state-of-the-art Microsoft .Net Windows Forms technology. The project also includes numerous upgrades to the search and reporting capabilities of the online Survey System, which is web-based and uses ASP.Net technology running on a SQL Server database.

270net initially transformed the Laboratory Safety Survey System from a paper-based system to a web-based system, and then created a Tablet PC based data collection system. These initiatives eliminated duplicate data entry and resulted in significant efficiency gains and cost savings. The new project will make the data collection and analysis process even more efficient by allowing software updates to automatically download to the tablets, and by improving search and reporting capabilities for key users.

About 270net Technologies

270net Technologies, located in Frederick MD, is a growing Veteran-Owned Small Business and a leading provider of technology solutions. 270net is a GSA IT70 Schedule holder and has core capabilities in internet application design and development, website development and hosting, real property and asset management products and services, system integration services, network management, and integrated technical services.
